INTRODUCTION

On the 18th – 20th of June 2010, the *University Foundation L.U.Me.N.Oli.S* together with *C.R.O.M.O.N. srl* (Centro Ricerche Olistiche per la Medicina Osteopatica e Naturale) and *Marrapese Edizioni*, have organized the second National event in Osteopathic Medicine.

The congress will have the following title:

2nd National Congress of Osteopathic Medicine
Scientists meet Osteopaths:
moving toward a Systemic Medicine
Osteopathy in the Ages of Life

The aim of the event will be to offer a solid context in which doctors, dentists, scientists, clinicians, and osteopaths can gather together to share a common language, discuss their successes as well as their doubts, needs and difficulties in operating in a synergistic manner.

Up to now, Osteopathic Medicine has been mainly an *Efficacy Based Medicine*. It has developed world wide because of its emphasis on preventing disease processes, on relieving aches and pains, on contributing to the healing process in patients with frank pathologies and on assisting people with chronic conditions to improve their quality of life.

However, as never before, Osteopathy is being required to become an *Evidence Based Medicine*, translating its results into a common clinical language.

The 2nd National Congress will be held over 3 days

The 3 days of congress will present, through 8 sessions, the evidence and the different modalities of application of osteopathic treatment in relation to the different ages of life (from gestation to the elderly).

Each session will host 4-5 presenters, discussing results from clinical trials in which the osteopathic and traditional medical approaches have been applied in specific controlled clinical contexts. At the end of each session, there will be time (30-40 minutes) for a "Round Table Session".

There will be the opportunity for questions from the participants, but overall for a constructive discussion between the speakers and special guests at the Round Table (such as International Osteopaths or Guests, Chairs of the main Hospitals in Rome, Chairs of the main Universities in Italy, Presidents of different associations such as Italian Register of Osteopaths, the Italian Register of Doctors and Dentists, political leaders and many others).

The aim of the Round Table session will be to elaborate guidelines and research projects for scientific *consensus* on the subjects presented during the previous sessions.

On the third day, there will be the possibility to participate in one or two workshops lead by some of the international guests and speakers of the congress.
